NEUROSCIENCE AND PHILOSOPHY presents the thought-provoking intellectual exchange on the conceptual presuppositions of cognitive neuroscience that took place at the 2005 meeting of the American Philosophical Association in New York. Maxwell Bennett and Peter Hacker’s book, Philosophical Foundations of Neuroscience, is highly critical of the conceptual commitments of cognitive neuroscientists. It aroused widespread interest and was chosen for an “authors and critics” debate at the APA. Daniel Dennett and John Searle—two leading philosophers who have written extensively on the subject—were chosen to be the critics to whom Bennett and Hacker would respond. In the impassioned debate that ensued, fundamentally different conceptions of philosophical method, cognitive-neuroscientific explanation, and human nature clashed.

The themes discussed in this engaging and highly readable confrontation have a wide range. They investigate the nature of consciousness, the bearer and location of psychological attributes, the intelligibility of talk of maps and representations in the brain, the notion of “qualia,” the coherence of the notion of an “intentional stance,” and the relationships between mind, brain, and body. It is left to the reader, as it was left to the audience of the original debate, to decide which conception is appropriate.

Neuroscience and Philosophy is an exciting and challenging introduction to the philosophical problems raised by cognitive neuroscience.

MAXWELL BENNETT is Professor of Neuroscience at the University of Sydney. He is the author of numerous books in neuroscience and philosophy, including History of the Synapse.

DANIEL DENNETT is Austin B. Fletcher Professor of Philosophy at Tufts University. His most recent book is Breaking the Spell: Religion as a Natural Phenomenon.

PETER HACKER is a Fellow of St. John’s College, Oxford. His books include Philosophical Foundations of Neuroscience, which he co-authored with Maxwell Bennett.

JOHN SEARLE is Mills Professor of the Philosophy of Mind and Language at the University of California, Berkeley, and is the author of Freedom and Neurobiology: Free Will, Language, and Political Power (Columbia).

“‘If you can get two sworn and unrestrained philosophical enemies such as Daniel Dennett and John Searle to join forces against you, you must at the very least be described as the controversialists of our time.’”—Akeel Bilgrami, Columbia University

“The points at issue between these four sophisticated and articulate thinkers concern not only neurophysiology and philosophy of mind but the whole nature of philosophy itself and its relationship to science. The debates here give the reader an unparalleled chance to reach a personal decision on issues of fundamental intellectual importance.””—Anthony Kenny, St. John’s College, Oxford University
